(+)d8-THC or d9-THC. At this time	there are no reference standards available for (+)d8-THC. (+)d8-THC is a differer on of (+)d8-THC and d9-THC is problematic for the scientific community as a whole.	vatory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either t compound from the main (-)d8-THC cannobinoid and, therefore, these two compounds may have different efficacles. Using the most advanced instruments and PharmLabs believes the unidentified peak to be a combination of (+)d8-THC and d9-THC with the majority, if not all, of the concentration being (+)d8-THC.
